

Execution time in nanoseconds, per iteration, as a function of the number of threads, of each of the tested thread pools.

Efficiency ratio between baseline and the tested thread pool, divided by number of threads. Sub-linear, but does not degrade too much as number of threads increase.

Operating system: Centos7 kernel: 3.10.0-693.11.6.el7.x86\_64

Hardware: 24 cores, Intel(R) Xeon(R) CPU X5680@3.33GHz
